

The search and localization of single pulses in VLBI observation

Liu, Lei (刘磊)

Shanghai Astronomical Observatory, CAS

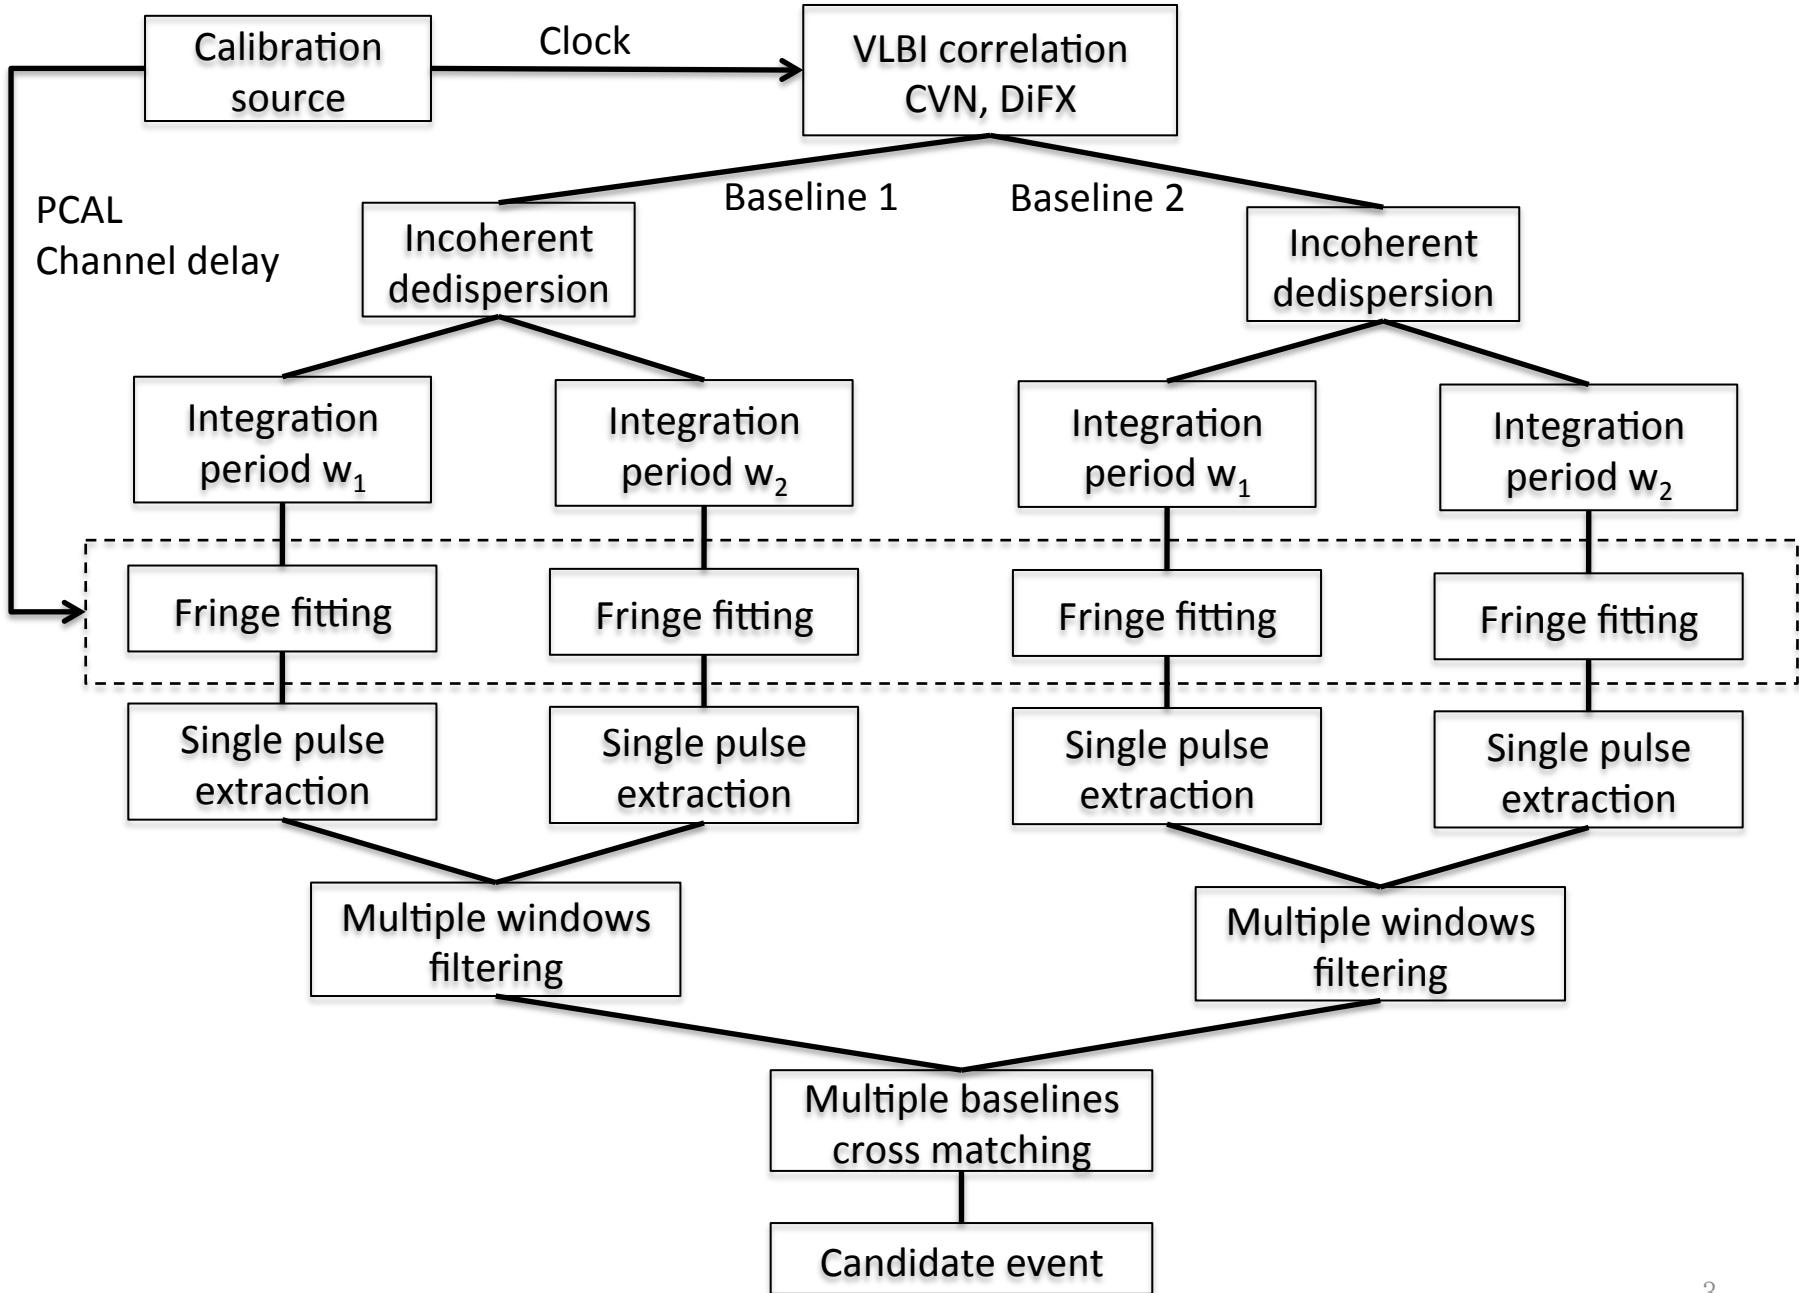

liulei@shao.ac.cn

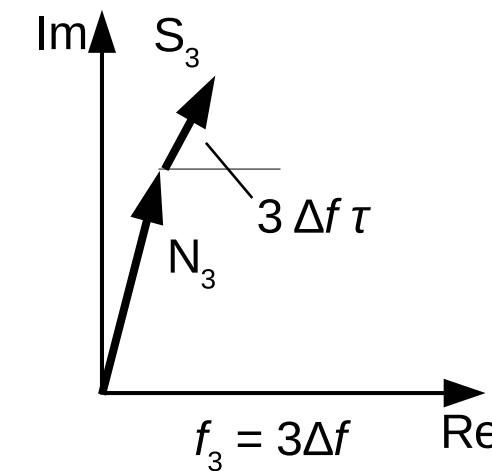

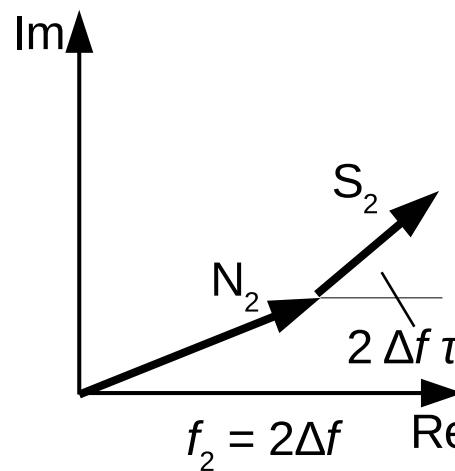

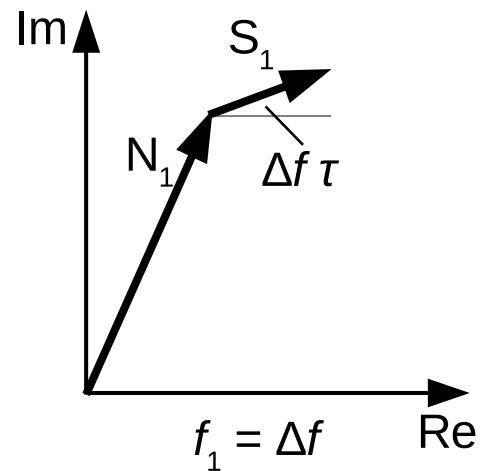

Jul. 5, 2018 @ FPS7, Guangzhou

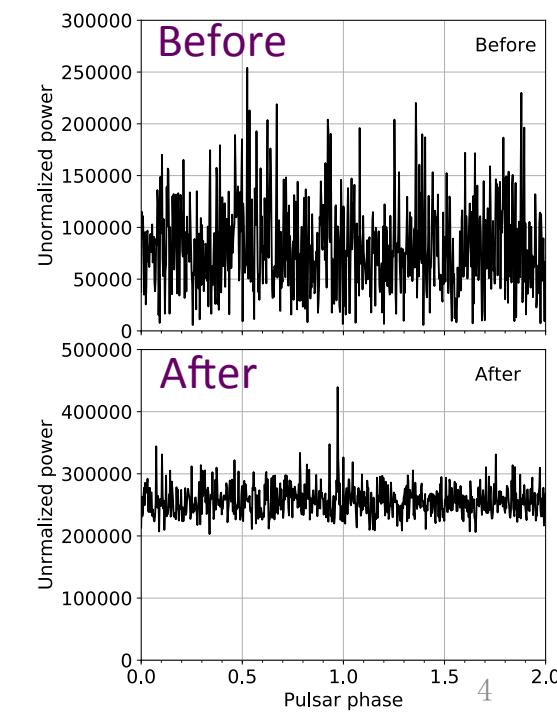

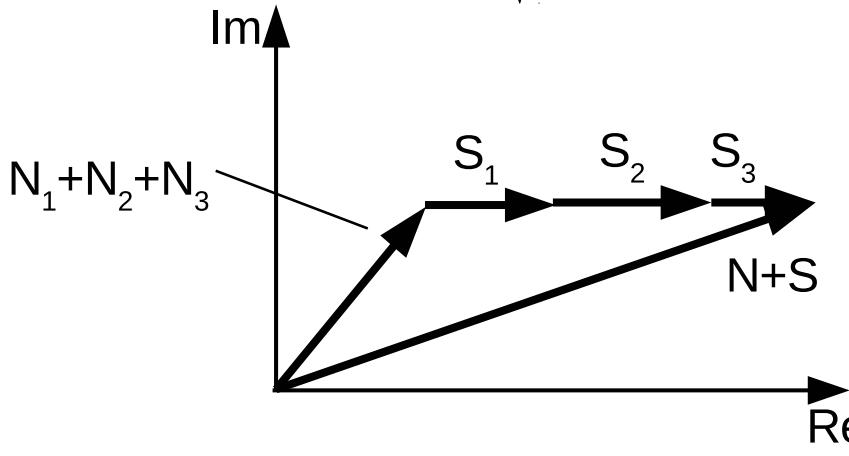

Outline

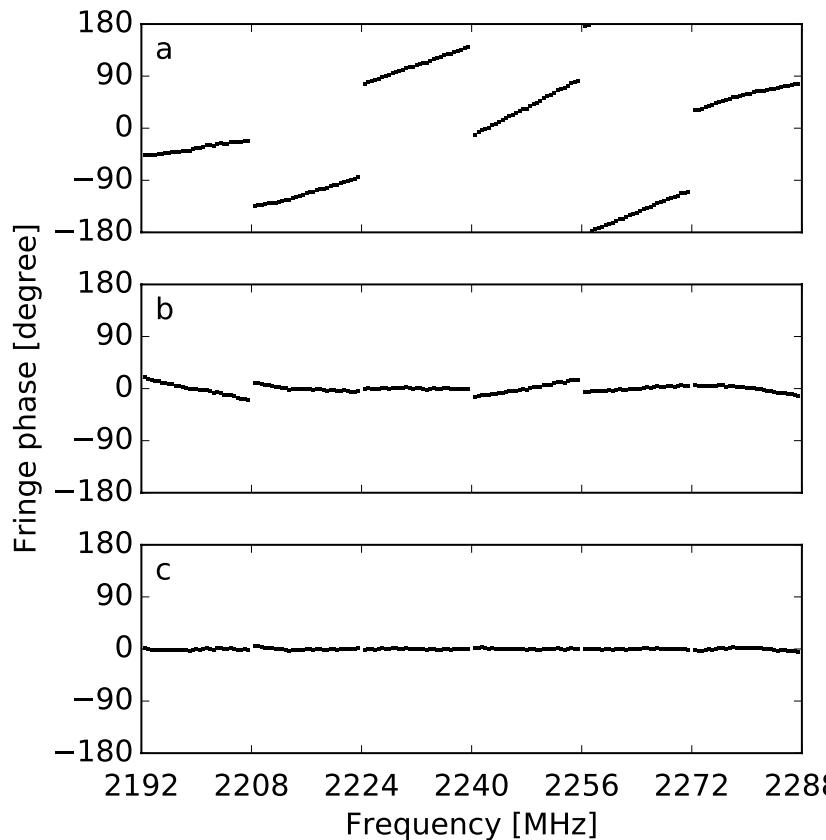

- Single pulse search method
 - VLBI cross spectrum based
 - Designed for FRB search in VLBI observation
 - Extract single pulses from RFI contaminated data
- Localization of single pulses
 - Radio imaging
 - Direct solving

Fringe Fitting

$$G_{k_0, l}(\Delta\tau_s, \Delta\tau_m) = \sum_{n=0}^{N-1} \sum_{j=1}^{J-1} S_{k_0, l}(n, j) e^{-i[2\pi f_j \Delta\tau_s + 2\pi(f_0^n - f_{\text{ref, fit}}) \Delta\tau_m + 2\pi(f_j - f_{\text{bw}}/2) \Delta\tau_0^n + \Delta\phi_0^n]}$$

Diagram illustrating the components of the equation:

- Single band delay:** Points to the term $\Delta\tau_s$.
- Multiple band delay:** Points to the term $\Delta\tau_m$.
- Cross spectrum:** Points to the term $S_{k_0, l}(n, j)$.
- Channel delay calibration:** Points to the term $f_0^n - f_{\text{ref, fit}}$.
- Phase calibration:** Points to the term $f_j - f_{\text{bw}}/2$.

Raw cross spectrum

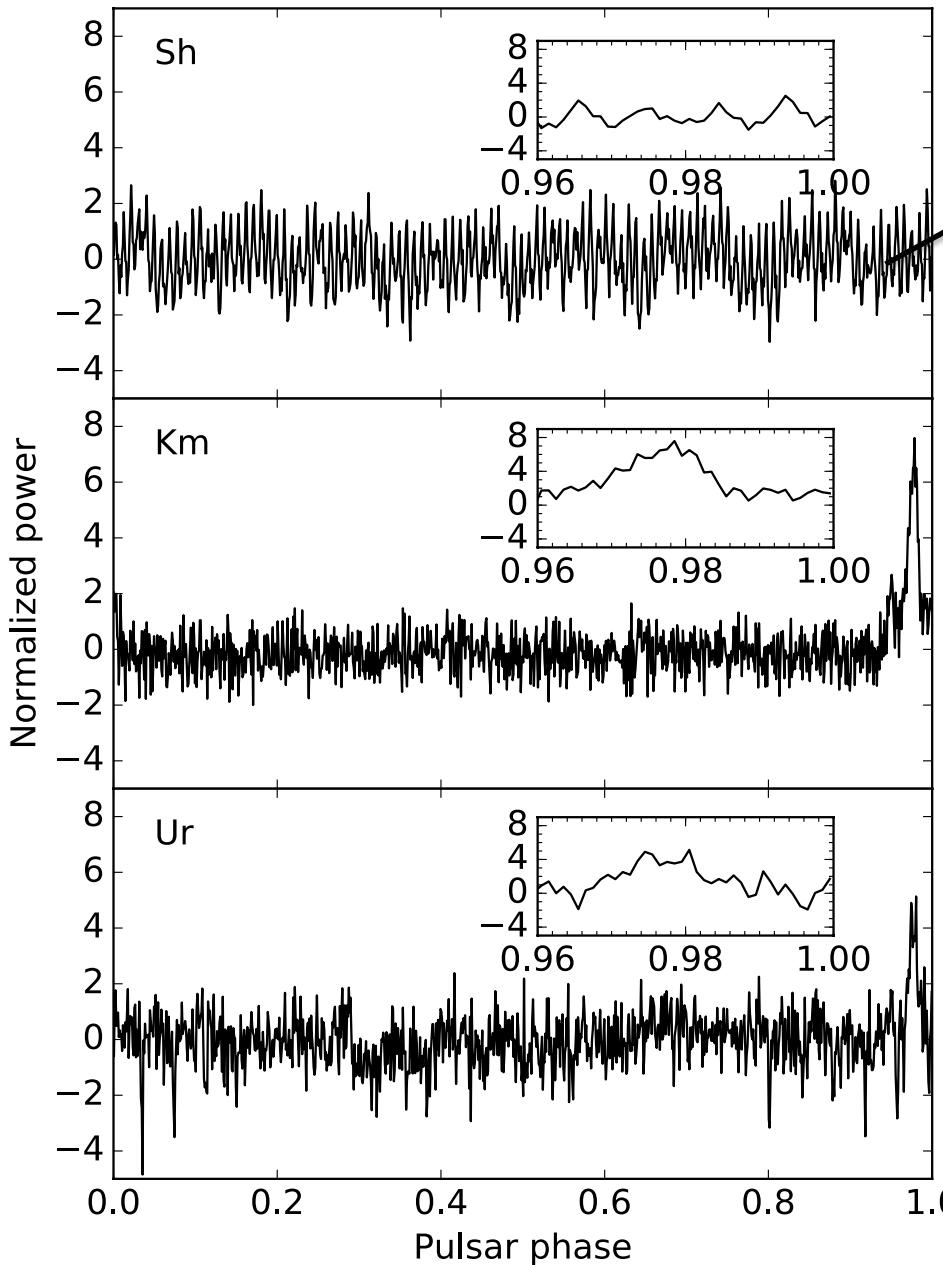

Fringe fitting:
Phase calibration only

Fringe fitting:
Phase + channel delay calibration

Single pulse search in pulsar data set

- Experiment psrf02 (CVN)
 - Time Feb. 25, 2015
 - Stations Sh, Km, Ur
 - Target source J0332+5434
 - Phase reference source J0347+5557
 - Calibration source 3C273
 - S band, 2192 MHz - 2288 MHz, 6 channels
-

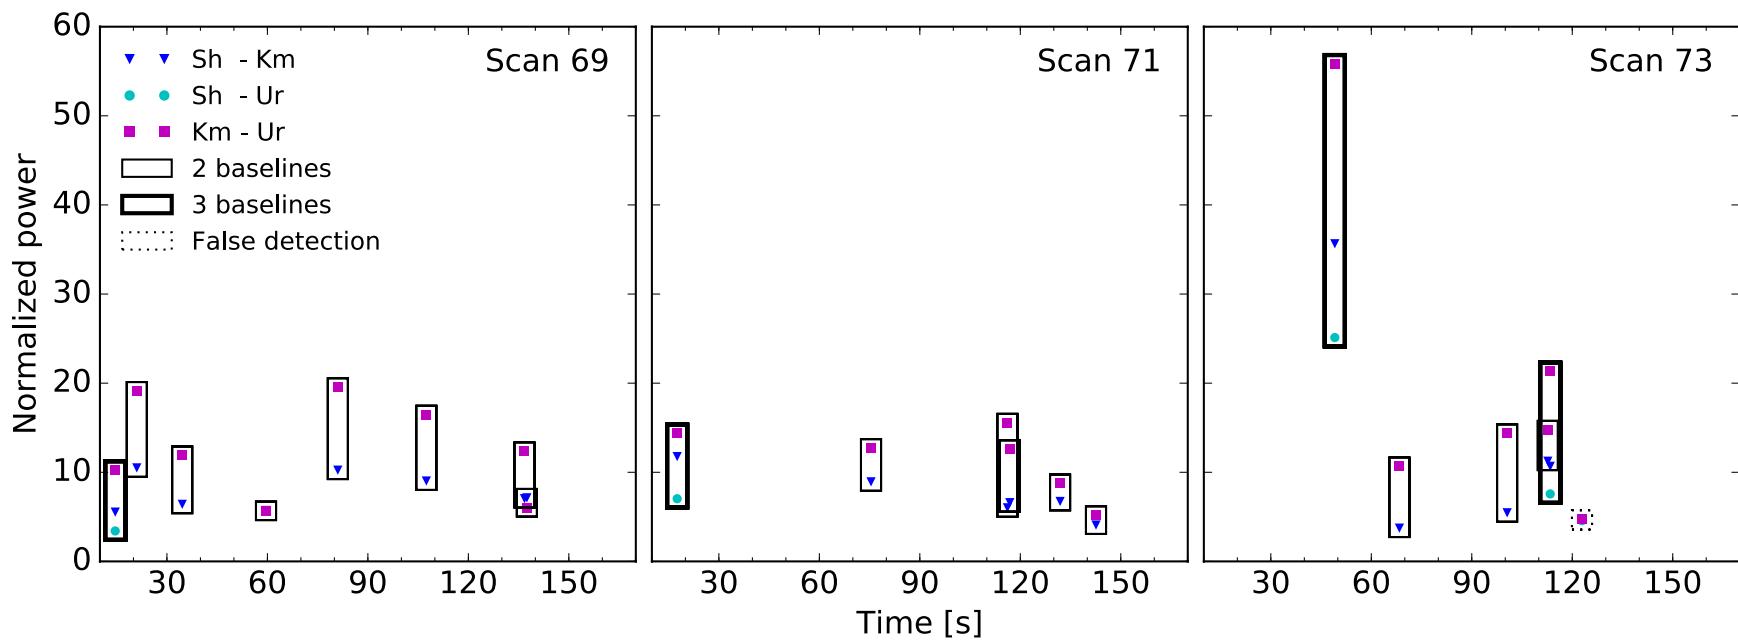

100 Hz RFI

J0332+5434

Period: 714.5 ms
DM: 26.833 pc cm⁻³
Flux: 0.1 Jy @ 2.2 GHz

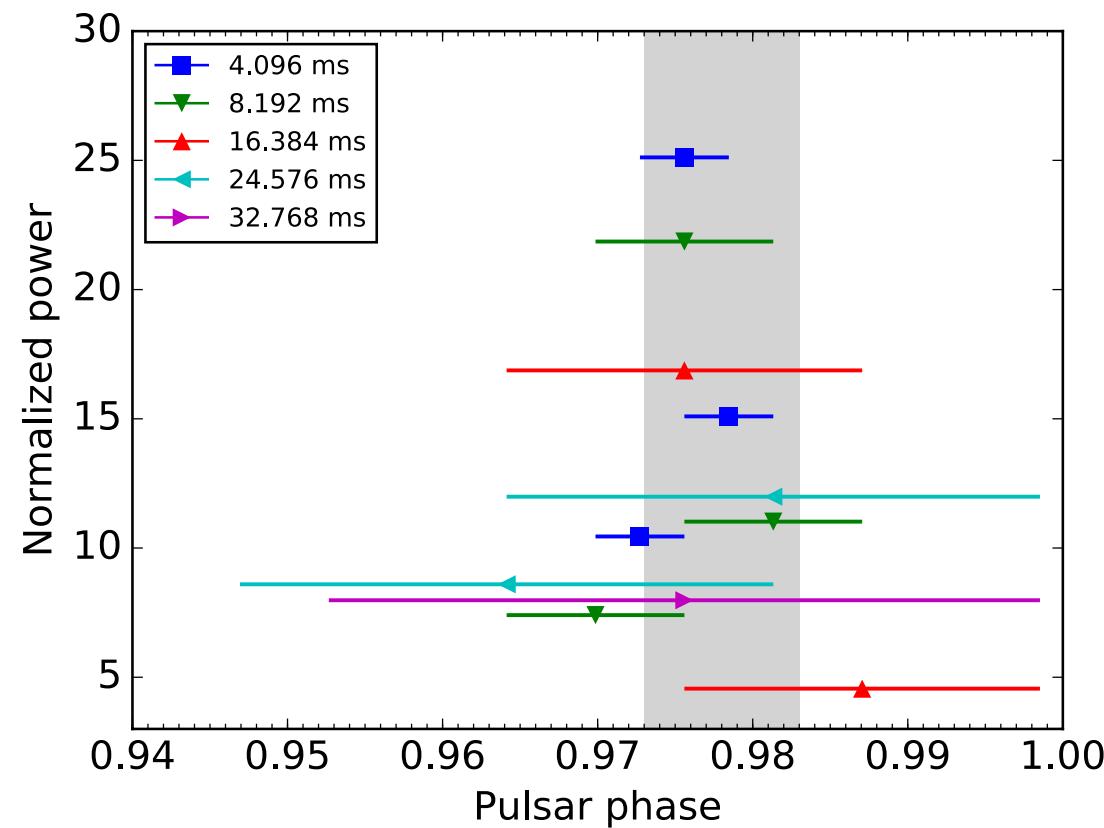

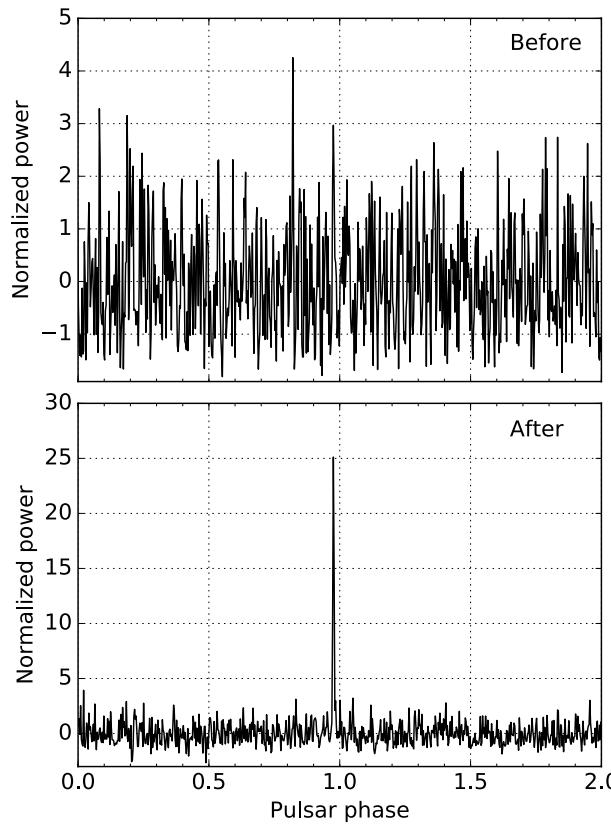

Detection result

2 baselines: 16 (15)
3 baselines: 4 (4)

Single pulse extraction: Sh-Ur

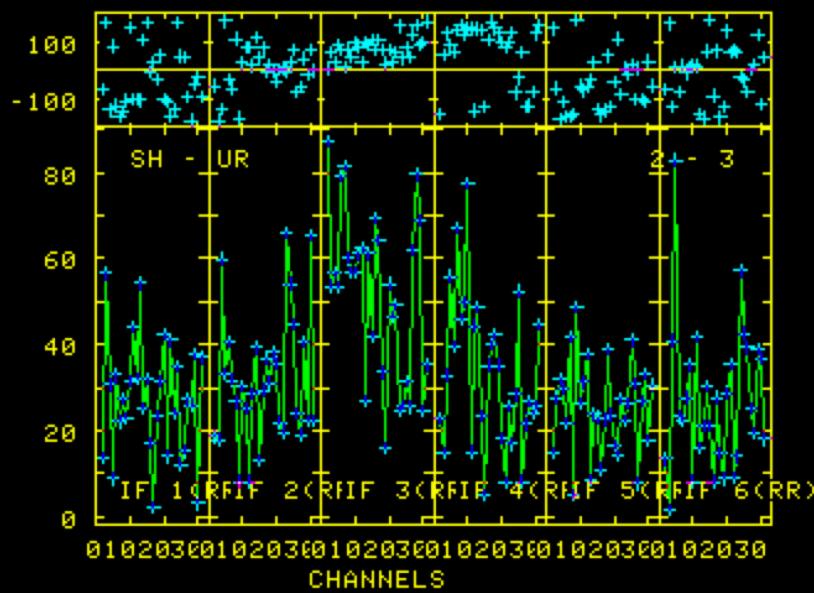

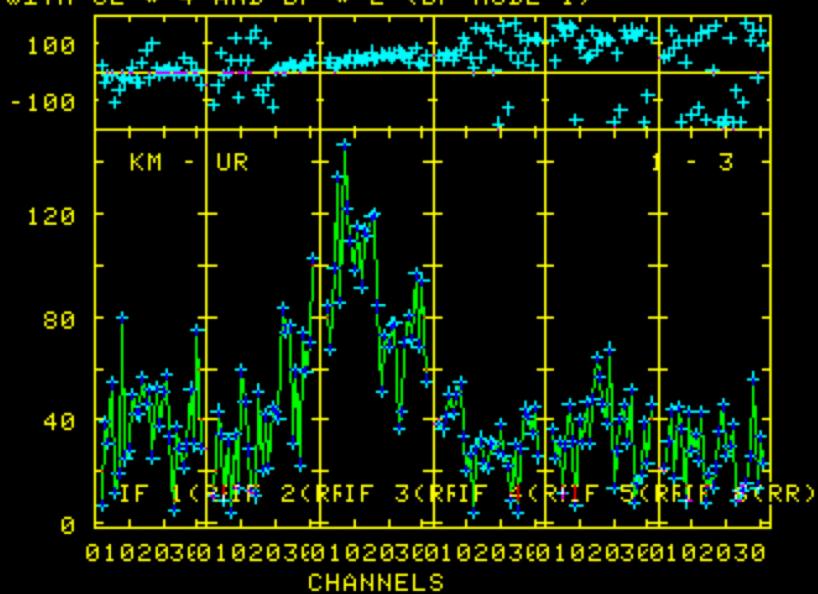

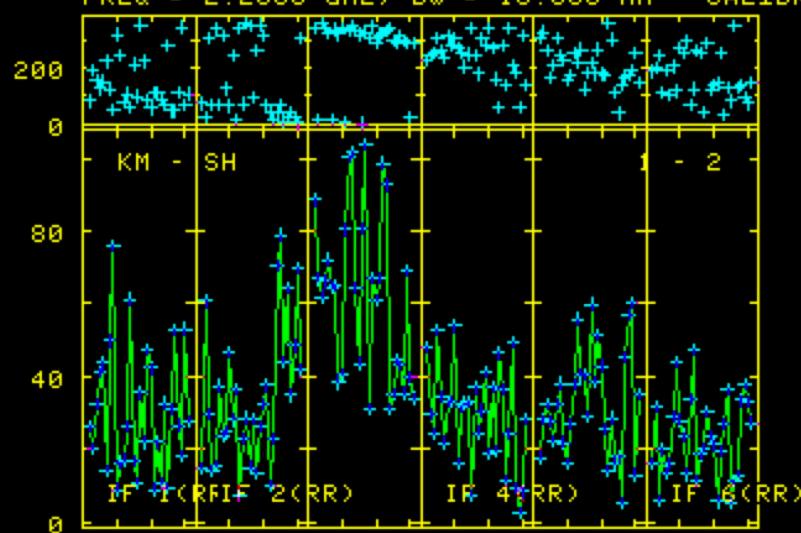

Radio imaging

- Phase reference
 - Reference source: J0347+5557 (1.8 degree)
- AIPS (31DEC18)
- 4 ms integration

Direct solving: $\Delta\tau = \frac{\partial\tau}{\partial\alpha}\Delta\alpha + \frac{\partial\tau}{\partial\delta}\Delta\delta$

- Geodetic VLBI
 - v Solve
 - MBD only
 - Ambiguity ~ 100 ns
- Phase reference
 - Delay fitting across the band
 - Much larger searching area

Summary

- VLBI cross spectrum based single pulse search method
- A full set of single pulse study tools
 - DiFX, CVN correlator support
 - Fringe fitting, multiple windows filtering, multiple baselines cross matching, etc.
- Localization
 - Phase reference
 - Direct solving
- Planned observations: CVN, EVN, geodetic VLBI

Thank you!
