A material world in the “old” physics

Those are *part* of
the material world...

A material world in *the “old” physics*

- and the old physics = standard model of particle physics...

$$P=0 \uparrow \ell \sim 0.5 \text{ fm} \uparrow$$

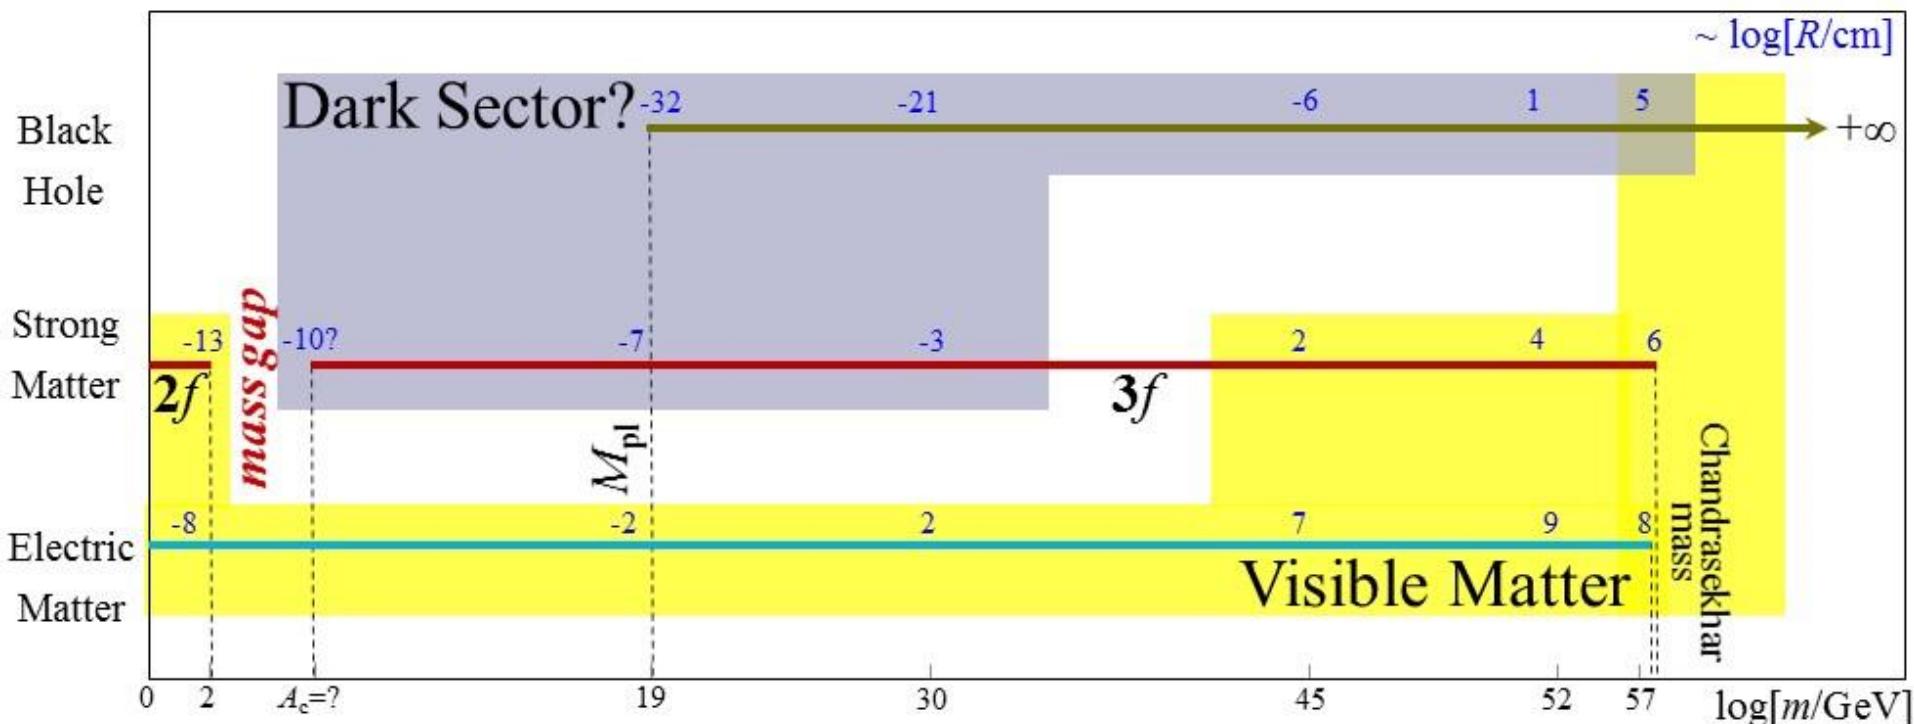

$$\rho c \approx \hbar c / \ell \sim 0.5 \text{ GeV}$$

A material world in the “old” physics

A world conjectured in the standard model of particle physics: ***electric*, *strong*, and *singular!***
(condensed matter power off, without energy supply)

A material world in the “old” physics

What is neutron star?

(understandable if understanding no *proton star*)

neutron star := flavor-asymmetrical

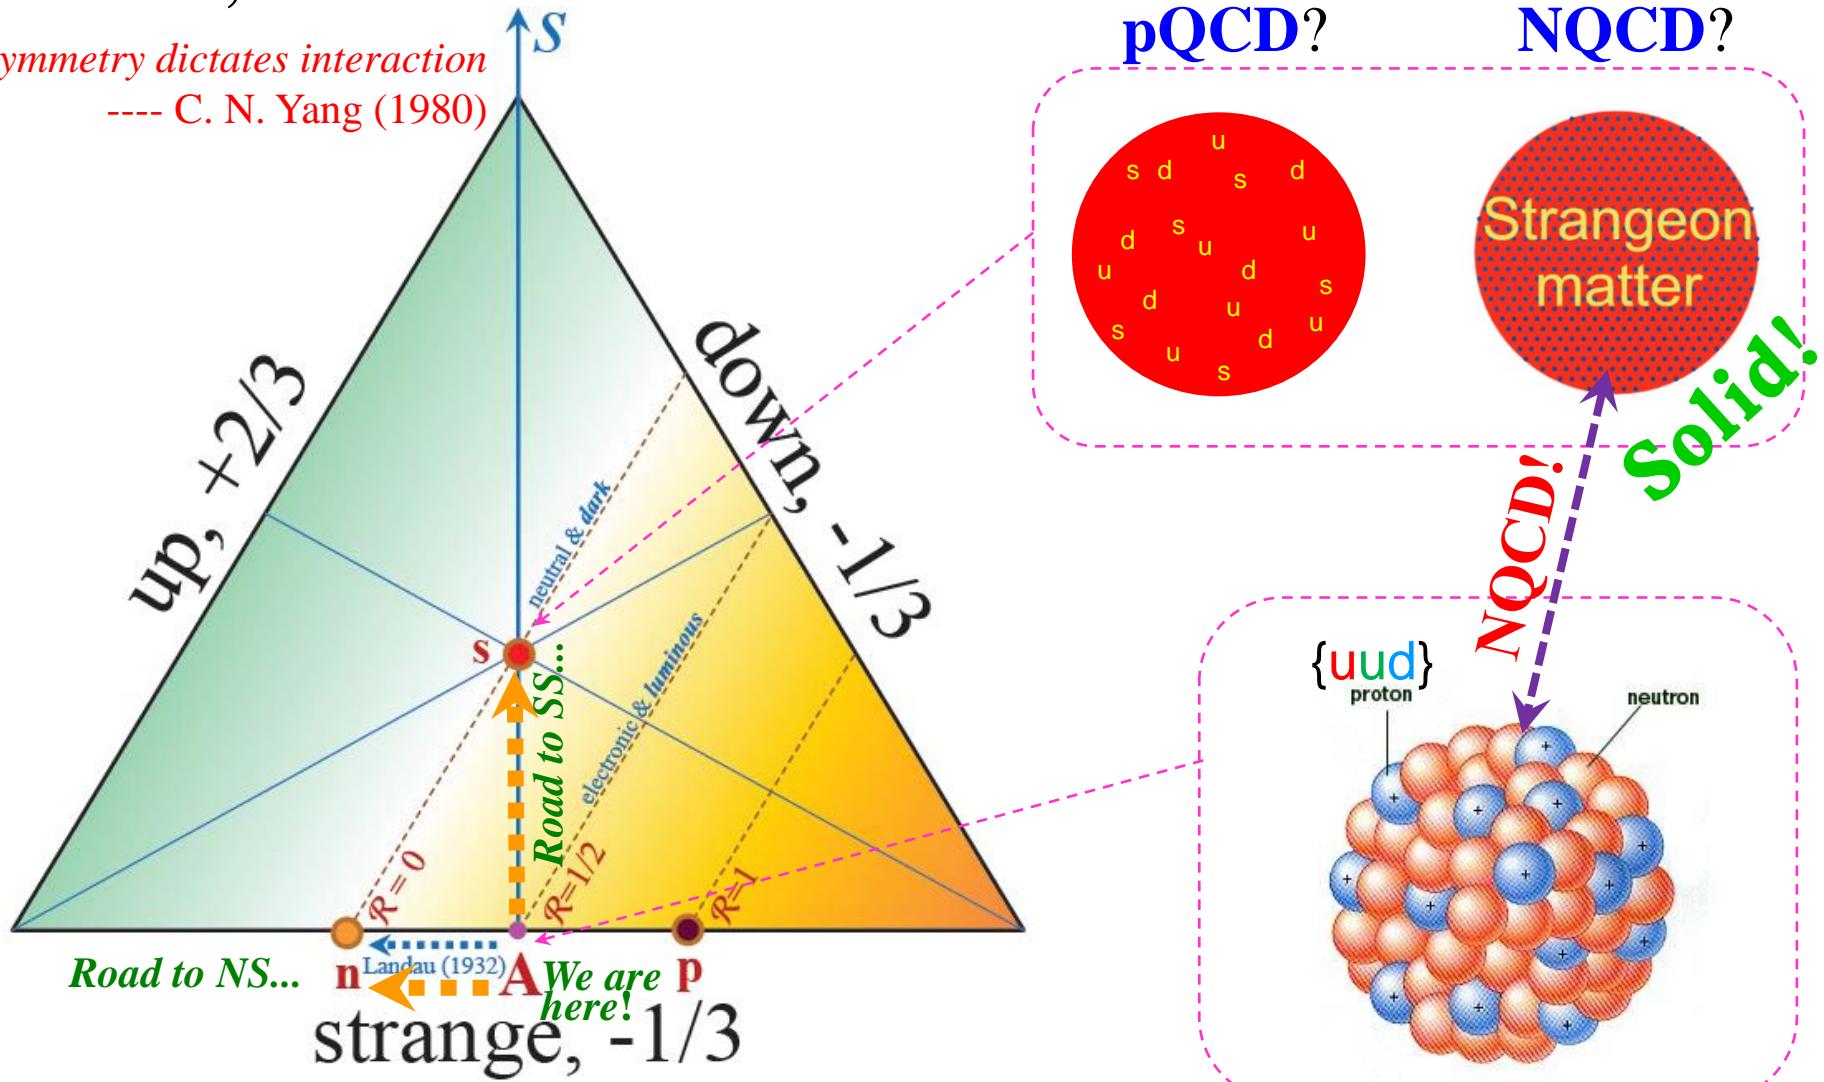

strange star := flavor-symmetrical

What is neutron star?

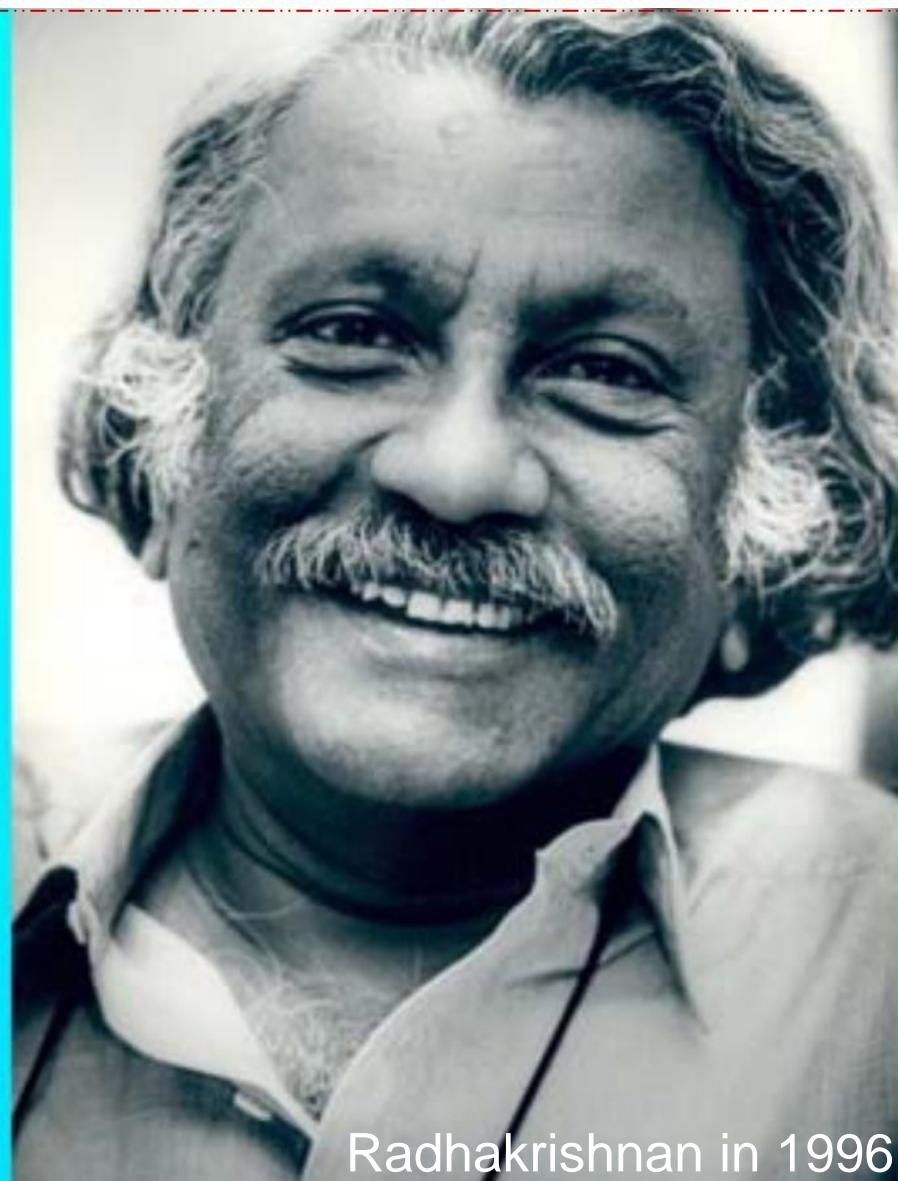

- In fact, *neutron* star is *neutral* star...

Symmetry dictates interaction

It has been proposed that the matter could be 'an', strange nucleons but with negative s . A strangeon star should not have a regular surface covered with small hills ('zits') in this schematic illustration. The pulsar surface might be responsible for magnetospheric activity and the mysterious coherent radio emission, as discussed in the contribution by Xu and Wang, this issue, p. e230153. Zits may also be responsible for the significantly non-symmetrical sparking discovered in the 110-min polarization observation of pulsar PSR B0950+08 targeted with China's Five-hundred-meter Aperture Spherical radio Telescope, FAST. Details can be found in the contribution by Wang et al., this issue, e240010.

A nucleon-strangeon *membrane*?

2

- Meaningful for SNE, GRB/FRB, merge, even ULX...
(strangeon magnetar)? Xu&Busse2001, $E_{\text{mag}} \sim E_{\text{elast}}$?)
