Content

Inhomogeneous Chiral Phases in Two-flavor Quark Matter	Abuki, Hiroaki (1)
Impacts of Nuclear Symmetry Energy on Neutron Star Crusts	Bao, Shi-Shao; Shen, Hong (4)
Quark Magnetar in Confined Isospin- and Density-dependent Mass Model	Chu, Peng-Cheng; Chen, Lie-wen; Wang, Xin (7)
Collision-Induced Glitch/Anti-Glitches	Huang, Yong-Feng; Geng, Jin-jun; Zhang, Zhi-bin (10)
Ferromagnetism of Electrons in Solid Quark Cluster Stars	Lai, Xiao-Yu (13)
Super-Eddington Accretion in the Evolution of Neutron Star Binaries and Its Implications.....	Lee, Chang-Hwan (16)
Fluctuations in Dual Chiral Density Waves	Lee, Tong-Gyu (19)
The Type of Vela-like Pulsars: A Normal Neutron Star or a Hybrid Star?.....	Li, Ang; Wang, Jing-bo; Shao, Li-jing; Xu, Ren-xin (22)
Constraints on the Mass and Radius of Neutron Stars from X-ray Observations	Li, Zhao-Sheng (25)
Oscillation: The Key For Understanding Strange Radio Behaviors of AXPs/SGRs	Lin, Meng-xiang (28)
Two Types of Glitches in a Solid Quark Star Model	Lu, Ji-Guang; Zhou, En-ping (31)
EOS of Quark Matter and Structure of Compact Stars in a Fully Consistent Quasiparticle Model.....	Lu, Zhen-Yan; Peng, Guang-Xiong; Xu, Jian-Feng (34)
Asymmetric Neutrino Emissions in Relativistic Mean-Field Approach and Observables: Pulsar Kick and Rapid Spin-Deceleration of Magnetized Proto-Neutron Stars.....	Maruyama, Tomoyuki; Kajino, T.; Yasutake, N.; Hidaka, J.; Kuroda, T.; Cheoun, M. K.; Ryu, C. Y.; Mathews, G. J. (37)

Structure and Properties of Nuclear Matter at the First-Order Phase Transitions	Maruyama, Toshiki (40)
<u>Coexistence of Kaon Condensation and Hyperons in Hadronic Matter and Its Relevance to Quark Matter</u>	Muto, Takumi; Maruyama, Toshiki; Tatsumi, Toshitaka (43)	
Non-Abelian Vortex Lattice in Dense QCD.....	Nakano, Eiji (46)	
Supernova Explosion and Black Hole Formation with QCD Phase Transition	Nakazato, Ken'ichiro (49)
<u>Cooling of Compact Stars with Color Superconducting Quark Matter</u> Noda, Tsuneo; Yasutake, N.; Hashimoto, M.; Maruyama, T.; Tatsumi, T.; Fujimoto, M. Y. (52)	
<u>A Complete Equation of State for Astrophysical Simulations</u>	Shen, Hong (55)	
Pulsar Kicks via Chiral Asymmetry of Magnetized Stellar Matter	Shovkovy, Igor (58)	
Constraints on the Nuclear Saturation Parameters via Neutron Star Observations.....	Sotani, Hajime (61)
Dark Matter Capture in Neutron Stars with Exotic Phases	Tachibana, Motoi (64)	
<u>Massive Neutron Stars with Hadron-Quark Transition Core—Phenomenological Approach by “3-window model”</u>	Takatsuka, Tatsuyuki; Masuda, Kota; Hatsuda, Tetsuo (67)	
<u>Topological Aspects of the Inhomogeneous Chiral Phases and Implication on Compact Stars</u>	Tatsumi, Toshitaka (70)	
<u>Two Predictions for the Spin Down Behavior of Magnetar SGR J1745-2900</u>	Tong, Hao (73)	
<u>A Possibility of Quark Spin Polarized Phase in High Density Quark Matter</u>	Tsue, Yasuhiko; da ProvidENCIA, Joao; Providencia, Constanca; Yamamura, Masatoshi; Bohr, Henrik (76)	
The Structure of Strange Stars with a New Quark Mass Scaling	Xia, Cheng-Jun (79)	
<u>The Many Faces of Strange Matter: Compact Stars, Cosmic rays, and Dark Matter</u>	Xu, Ren-xin (82)
<u>Quark-Hadron Phase Transition with Finite-Size Effects in Neutron Stars</u>	Yasutake, Nobutoshi; Benic, S.; Blaschke, D.; Maruyama T.; Tatsumi, T. (85)
<u>Spontaneous Magnetization of Quark Matter in Inhomogeneous Chiral Phase</u>	Yoshiike, Ryo; Nishiyama Kazuya ; Tatsumi, Toshitaka (88)
<u>Self-consistent Thomas-Fermi Approximation for Equation of State at Subnuclear Densities</u>	Zhang, Zhao-Wen; Shen, Hong (91)
Non-equilibrium Phase Transition Caused by Non-Linear Phase Structure	Zhou, Xia (94)	

PREFACE

The standard model of particle physics accurately describes the negligible baryonic part, while unknown dark matter and dark energy dominate the Universe. Although the well-tested model has been proved to be successful by the discovery of Higgs boson, the nature of strong interaction at low energy scale is still far from the end, which is essential for us to understand atomic nuclei and compact stars as well as the early Universe. Certainly the quark degree of freedom could not be neglected here, and compact stars, where normal baryonic matter is intensely compressed by gravity, provide a unique test-ground for studying the non-perturbative behaviors of the strong interaction.

Heaven's message from a compressed matter star to the Earth dates back to 1054 AD when both Chinese and Japanese astronomers noted an unexpected and astonishing event: a supernova! The relics of the event includes the debris ejecta known as the Crab Nebula and a pulsar inside (the Crab Pulsar), both of which seem to tease our generation for still ignoring the explosion. Aiming at the puzzle, this bilateral meeting is to strengthen the researches, and foster collaborations between China and Japan, especially for the younger generation in both countries even the East Asia. Separated by a narrow strip of water, China and Japan have a long history of friendly exchanges, and we wish them every success in knowing nature's secrets.

On October 22, 2014, 17:30 Beijing time, this bilateral meeting came to a close. Yet, the presentations remain in forms of internet (<http://kiaa.pku.edu.cn/qcs2014/pro.htm>) and as the book of proceedings before you. Let's meet next time!
